
COFFEE SHOP
SALES ANALYSIS
A Power BI Dashboard Project

1. PROJECT INTRODUCTION & OBJECTIVE

To analyze coffee shop sales data and understand the business performance of different stores.

- Top selling products
- Compare store performance
- Analyze monthly sales trends
- And Understand customer purchasing patterns.

2.DATA SOURCE & OVERVIEW

- TRANSACTIONS TABLE –contains 1lakh 49thousand rows and 11 columns

In transactions table, the important columns are Transaction_id, transaction_date, transaction_time, transaction_qty, unit_price etc.

- PRODUCT TABLE – 80 products with product_id and product_type.
- STORE TABLE – contains 3 stores with store_id and store_location.

3.Data cleaning & transformation

- Checked missing values.
- Verified data types and column formats.
- Used power query for data preparation.

4.Data Modeling

- Star schema
- Fact Table – Transactions table
- Dimension tables – Products, stores and date tables.
- One to Many relationship

5.Dax Measures & Calculations

Example Measures

- Total_Sales=SUMX(Transactions,Transactions[transaction_qty]*Transactions[unit_price])
- Total_Qty=SUM(Transactions[transaction_qty])
- Total_stores=DISTINCTCOUNT(Transactions[store_id])

WHY DAX?

- Used in Power BI to calculate important values like total sales , total qty , total transactions etc..
- It helps us analyze data and create meaningful insights.

6.Power BI features & interactivity

- Slicers
- Navigation buttons

7.KEY ANALYSIS & BUSINESS INSIGHTS

- Product Category – COFFEE – 38%
- Time Trend – Feb:76k, June:166k. (growth from Feb to June)
- Store Performance – Top: Hell's Kitchen:237k sales

8.CONCLUSION

This Coffee Shop Sales Analysis Project helped me understand sales performance using Power BI.

Analyzed sales trends, product categories and store performance through interactive dashboards.

This analysis helps the business make better decisions and improve sales.

THANKYOUU!
